

# US Patents - for screw feeding multihead weigher

**US PATENTS:** US 7,569,778 B2 & US 7,301,110 B2

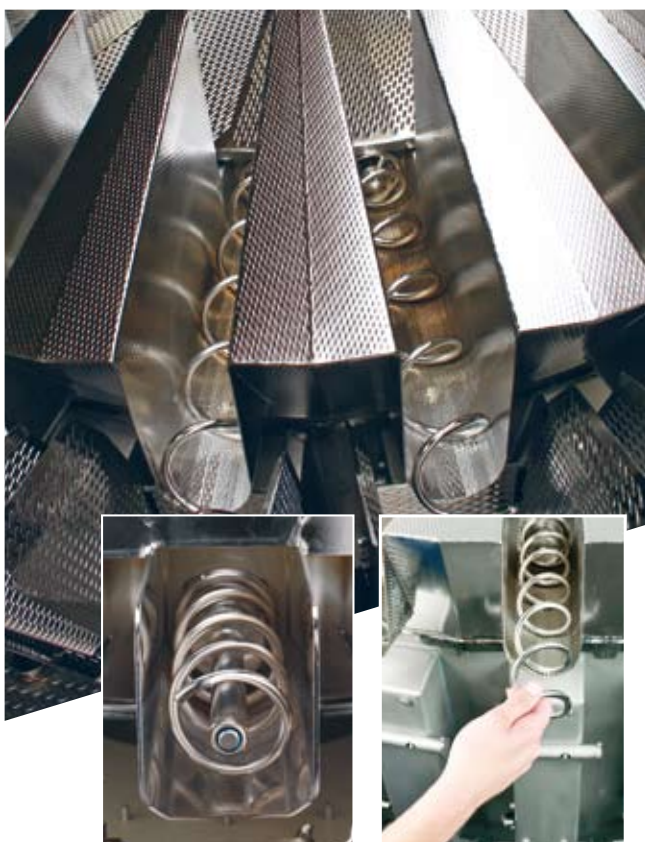

Cabinplant developed the World's first screw feeding multihead weigher and has been granted with two US patents for the unique way of handling products on a multihead weigher. Cabinplant's screw feeding multihead weigher is especially designed to handle sticky and wet products such as fresh poultry, beef, pork or lamb chops, meat cubes, with or without marinade, seafood, pasta, cabbage and many more.

**Cabinplant**

Precise by nature

Cabinplant's screw feeding principle has introduced the benefits of multihead weighing to processors of wet and sticky products and has made it possible for industries within meat, poultry, seafood, vegetables, confectionery and ready meals to achieve a higher weighing accuracy and to reduce giveaway costs considerably. Additionally, our customers have benefitted from a short payback time on their investments.

**Please contact your local Cabinplant representative or Cabinplant DK for information on how we can help you optimize your weighing and packing process.**

**The patents are still pending in other countries world-wide.**
